

# POWERFUL PROTECTION

Depend on the world's most trusted brand for corrosion protection and superior lubrication.

- ✓ Longest Lasting Performance
- ✓ Non-Toxic / Non-Hazardous
- ✓ Stops Rust on Contact
- ✓ Lanolin Based
- ✓ No Solvents
- ✓ Easy to Apply

# Powerful Corrosion Protection & Superior Lubrication.

## WHEN IT COMES TO PROTECTING WHAT'S IMPORTANT, WHY SETTLE FOR SECOND BEST?

Fluid Film is the worldwide standard for corrosion control and equipment maintenance. Its unique woolwax (lanolin) formula contains no solvents to evaporate. Always active, it will not become tacky and will not readily freeze, providing long-term protection to all metals and superior lubrication to all moving parts.

Proven in the most severe conditions, Fluid Film stops rust on contact. It creates a non-drying barrier of protection that moisture and corrosive environments cannot penetrate. Fluid Film will not harm paint, plastics or oil-resistant rubbers and will not burn greenery when used on cutting devices. It is not water-soluble and resists wash-off. Fluid Film protects in sub-zero weather conditions. It is non-conductive and does not support static electricity on electronic equipment.

**Some exceptional applications include, but are not limited to:** Equipment being shipped or stored, Mower Decks, Tools, Metals exposed to salt air and water, Battery Terminals, Hinges, Locks, Chains, Cables, Rollers, Slides, Firearms, Hedge Trimmers, Snow Equipment and Valves.

Fluid Film is economical, easy to apply and available in a variety of container sizes:

- AGRICULTURE 
- AUTOMOTIVE 
- AVIATION 
- BOATING 
- HEAVY MARINE 
- HOME 
- INDUSTRIAL 
- LAWN & GARDEN 
- RECREATIONAL 
- TRUCKING 
- WINTER EQUIPMENT 

### FLUID FILM for handy, quick and convenient applications.

Choose the convenient and easy to apply aerosol can, brush-can with built in applicator for detail applications or the refillable/reusable non-pressurized hand-pump. Each prevents corrosion on all metals, lubricates moving parts and delivers long lasting powerful protection.

### FLUID FILM for larger jobs and industrial applications.

For easy application with a brush, roller or pressurized spray, select the economical 1 gallon, 5 gallon or 55 gallon container. They're the number one choice for long lasting, powerful corrosion protection for all metals and superior lubrication for moving parts.
